

How to Change Default System Scaling

The scaling value is what tells the system how to render the System UI & Application UI to adopt to the display.

> Go to “**Settings → System → Display**”

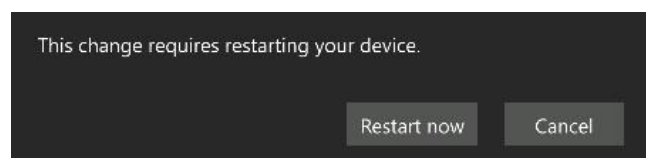

Click on the slider which is under the text “**Size of text, apps, and items on this display**”

Drag it to **right** to **increase** the value which will result in **bigger text & adaptive big UI** for the size

Drag it to **left** to **decrease** the value which will result in **smaller text & adaptive small UI** for the size

> Click “**Apply**” to set the chosen value, and then click “**Restart now**” to apply it

Windows 10 Mobile (Lumia) Group :- <https://t.me/Windows10Phone>

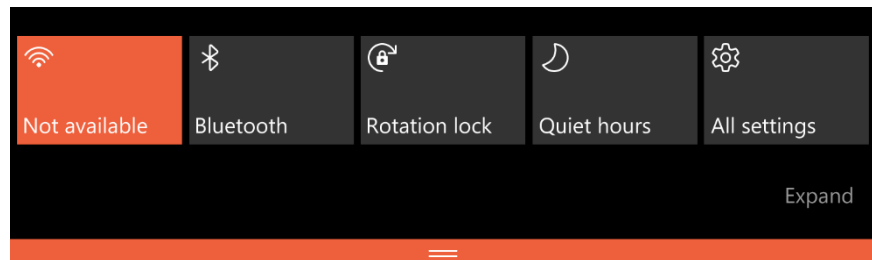

What you will get with smaller scaling value ?

NOTE

Need a specific Scaling value to get these, but due to that being different from device to device due to the Display Size in different models, there is no exact value.

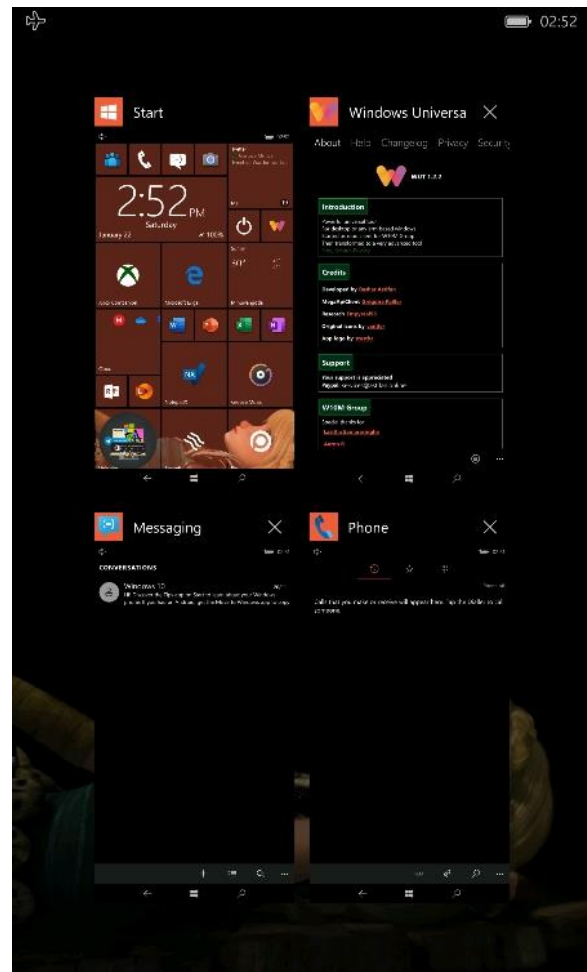

So, keep lowering Scaling value until you can see each of these in effect.

1. 5 Column Action Center toggles

2. 4 Apps in Task switcher

Instead of 1 Apps, you will get 4 apps in task switcher in one windows.

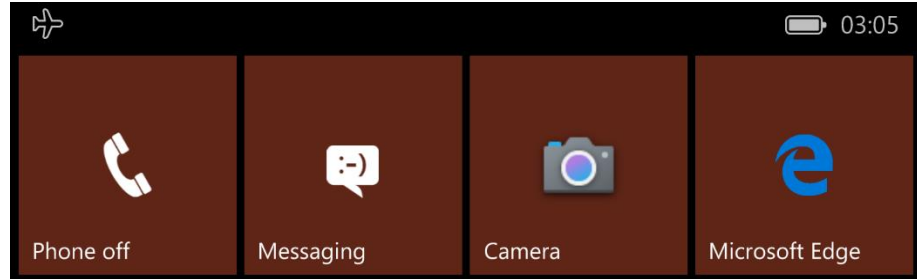

Windows 10 Mobile (Lumia) Group :- <https://t.me/Windows10Phone>

3. 4 Medium Tiles in Start

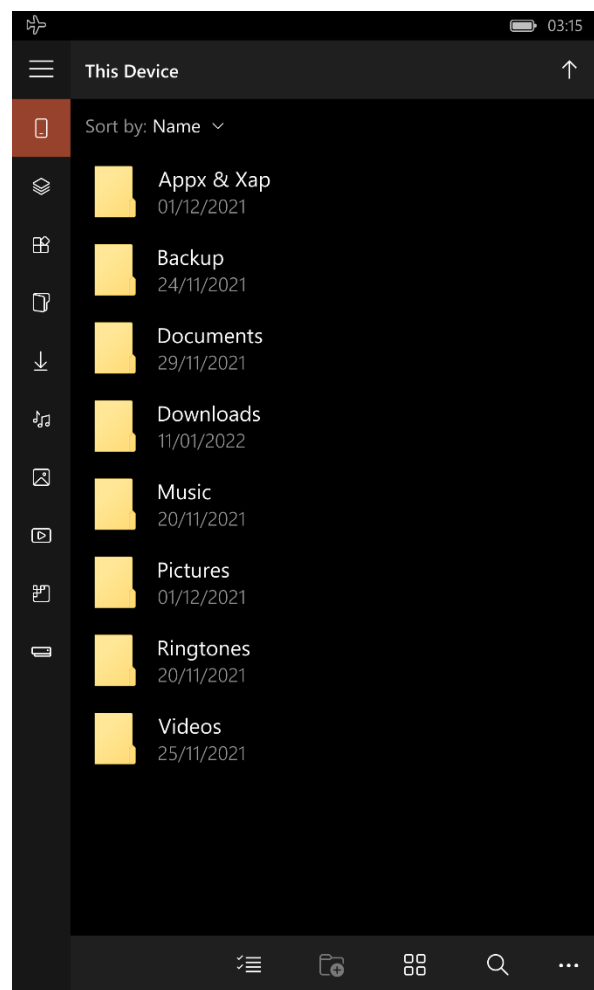

The start can feature 4 Medium tiles instead of Default 3 medium tiles

(Need activation in “Settings → Personalization → Start”, toggle ON “Show more tiles”)

5. Desktop like Interface for UWP apps

The interface of UWP apps will adopt (Only if the app is coded for that) to suit with small Text & UI featuring an interface similar to what can be seen in a PC.

6. And many more changes across the System....

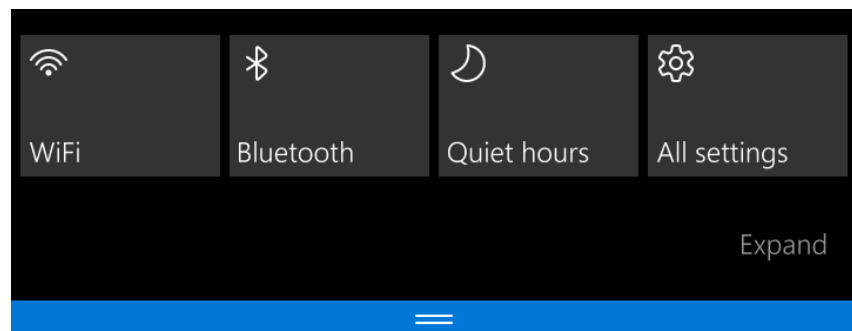

What you will get with higher Scaling Values ?

NOTE

Need a specific Scaling value to get these, but due to that being different from device to device due to the Display Size in different models, there is no exact value.

So, keep increasing Scaling value until you can see each of these in effect.

1. 4 Column Action Center

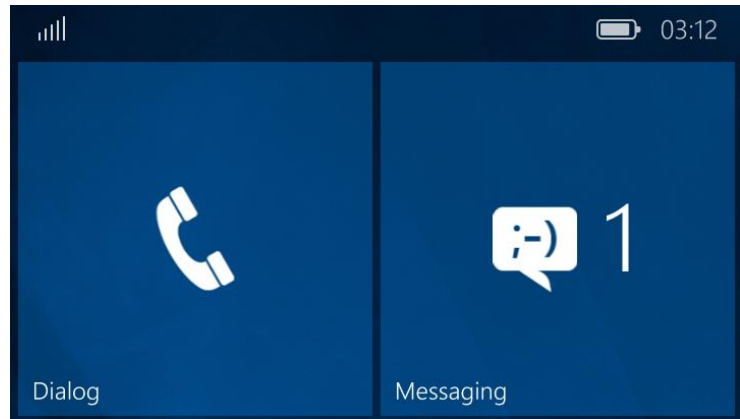

2. 1 App per windows in Task Switcher

3. 2 Medium tiles in Start

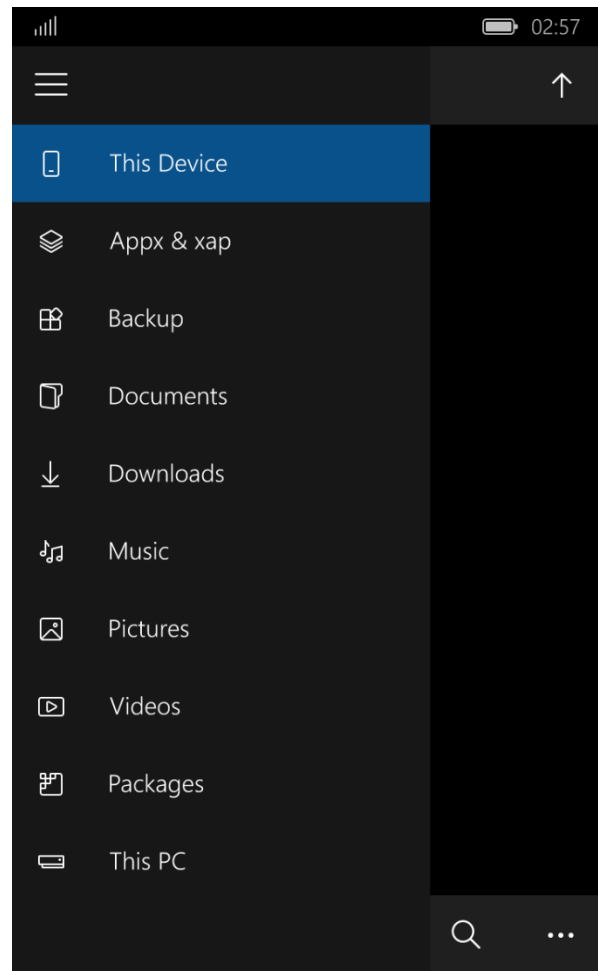

The start can feature 2 medium tiles instead of default 3 medium tiles

(Need activation in “**Settings** → **Personalization** → **Start**”, toggle OFF “**Show more tiles**”)

4. Compact Interfaces for UWP apps

The interface of UWP apps will adopt (Only if the app is coded for that) to suit with larger Text & UI featuring an big and compact interfaces.

6. And many more changes across the System....
